French Jaguar A

法国“美洲虎”A攻击机

1:72

The Sepecat Jaguar was designed by the Britain and France as the new generation aircraft which can offer the close air support and train the new pilots in the early 1960s.  
The Jaguar in service nowadays are very different from the original plan. In the past decades of years, the Jaguar have shown its excellent ability as the attacker and trainer.  
The Jaguar A were the main force of the French Air Force until the day they retired. The Jaguar A joint most military operations of France during the service including the Acts of interference in Africa and the Gulf War.

Rafale B

法国“阵风”B型战斗机

1:48

The Dassault Rafale is a new-generation ultramodern twin-jet combat plane. It meets the combat requirements for the next century, combining in a single plane the multiple roles that otherwise would be carried out by many different types. The Rafale A made its maiden flight in 1996. With this new aircraft the French forces wished to relieve, not only the Crusader and the naval Etendard.

The Grumman A-6 Intruder was designed as the replacement of the A-1 Skyraider. It's the first all-weather attack aircraft of the US Navy. The aircraft were called as the A2F before 1962 and got the new name, the A-6 Intruder, in service. The outstanding all-weather capability soon made the A-6 the main strike force of the Navy and Marines, and devoted into the Vietnam War.

The A-6E is the last production type of the Intruder family. They were developed for the strike missions. A new AN/APQ-148 radar replaced the old version one and the DIANE system were replaced by the latest computer system. In the late 1970s, the new navigation system called CAINS were equipped, the CAINS A-6E can be distinguished by the extra air scoop on top of the fuselage near the vertical stabilizer.

The EMB-314 Super Tucano, also named ALX or A-29 is a turboprop aircraft designed for light attack, counter insurgency (COIN), close air support, aerial reconnaissance missions in low threat environments, as well as providing pilot training. Designed to operate in high temperature and humidity conditions in extremely rugged terrain, the Super Tucano is highly maneuverable, has a low heat signature, incorporates 3rd generation avionics and weapons system to deliver precision guided munitions. It is currently in service with the air forces of Brazil, Dominican Republic, Colombia, Ecuador, Chile and Burkina Faso, and has been ordered by Indonesia, Angola, and the United States

The Hawk T1A is a modified Hawk T1, which was intended to replace the Hawker Hunter in the RAF's Tactical Weapons Units. A total of 89 aircraft were converted to carry two underwing AIM-9L Sidewinder air-to-air missiles and a centreline gun pod. During the 1980s, the RAF began using TWU Hawks in the Mixed Fighter Force (MFF) concept; the intention was to attach three of four Hawks to a Phantom or Tornado interceptor, which would guide them using its powerful radar onto enemy targets.

This is also the variant used by the RAF's Red Arrows display team; the underbody gun pod is used to carry oil for the display smoke system [citation needed]

**1:32**

The Illyushin IL-2 Sturmovik was a Soviet Union attack aircraft in the WWII. Designed as a armored low-level close-support aircraft capable of defeating enemy armor and other ground targets. First flew on 12 October 1940 as prototype TaKB-57. The aircraft entered production in March 1941 and came into service in May. A total of 36,163 were built. The Sturmovik played a crucial role on the Eastern Front, famous nicknames as the "Black Death". IL-2 Single-seat version, the early production, delivered to combat units in May-June 1941. Powered by AM-38 engine, equipped 20 mm ShVAK or 23 mm VYa cannon in main wing.

**83205** Spitfire Mk.Vb 英国喷火MK.Vb **1:32**

Late in 1940, the RAF predicted that the advent of the pressurised Junkers Ju 88P bomber series over Britain would be the start of a new sustained high altitude bombing offensive by the Luftwaffe, in which case development was put in hand for a pressurised version of the Spitfire, with a new version of the Merlin (the Mk VI). It would take some time to develop the new fighter and an emergency stop-gap measure was needed as soon as possible: this was the Mk V.

The basic Mk V was a Mk I with the Merlin 45 series engine. This engine delivered 1,440 hp at take-off, and incorporated a new single-speed single-stage supercharger design. Improvements to the carburettor also allowed the Spitfire to use zero gravity manoeuvres without any problems with fuel flow. Several Mk I and Mk II airframes were converted to Mk V standard by Supermarine and started equipping fighter units from early 1941. The majority of the Mk Vs were built at Castle Bromwich.

The Republic Aviation Company F-84 “Thunderjet” was a turbojet fighter-bomber aircraft. Originating as a USAF proposal for a daytime fighter 1944. The F-84 first flew in 1946 and it entered service in 1947. When production of the F-84 was close in 1953, about 4457 had been built, including 6 different versions.

F-84G is a single-seat fighter-bomber capable of delivering the Mark 7 nuclear bomb using the LABS, J35-A-29 engine, introduced the multi-framed canopy which was later retrofitted to earlier straight-winged F-84s. A total of 3,025 were built (1,936 for NATO under MDAP).

The PLL-05 120mm self-propelled mortar-howitzer system is one of the ZSL-92 wheeled APC-mounted light artillery systems fielded by the PLA in recent years. The artillery system features a 120mm gun, which combines the features of the mortar and the howitzer. The artillery fires projectiles at both short-range, high-arching ballistic trajectories (maximum 80°) and longer-range, less steep ballistic trajectories for indirect fire.

The PLL-05 uses a 6X6 wheeled chassis derived from the ZSL-92 APC. The combat weight is 16.5 tonnes, enabling the vehicle to be airlifted by a Y-8-sized transport aircraft. The vehicle is powered by a BPSL413F 4-stroke, 8-cylinder, turbo-charged, air-cooled diesel engine, which produces a standard power of 320hp. The vehicle is capable of a maximum speed of 85km/h on paved road and 50km/h when afloat. Two propellers are fitted at the rear of the vehicle for swimming.

The T-26 tank was a Soviet light infantry tank used during many conflicts of the 1930s as well as during World War II. It was a development of the British Vickers 6-Ton tank and is widely considered one of the most successful tank designs of the 1930s. It was produced in greater numbers than any other tank of the period, with more than 11,000 produced. During the 1930s, the USSR developed approximately 53 variants of the T-26, including other combat vehicles based on its chassis. Twenty-three of these were mass-produced.

The T-26 was used extensively in the armies of Spain, China and Turkey. In addition, captured T-26 light tanks were used by the Finnish, German, Romanian and Hungarian armies.

**83816** German Sd.Kfz. 222 Leichter Panzerspahwagen (3rd Series) 1:35  
德国Sd.Kfz.222装甲侦察车(3批次)

The Leichter Panzerspahwagen were a series of light four-wheel drive armoured cars produced by Nazi Germany from 1935 to 1944. It used the standard Sd.Kfz. 801 chassis with an angled armoured body and turret.

The rear mounted engine was a 67 kW (90 hp) Horch 3.5 petrol engine, giving it a road speed of 80 km/h and a cross-country speed of 40 km/h. It had a maximum range of 300 km.

Used by the reconnaissance battalions (Aufklärungs-Abteilung) of the Panzer divisions, the type performed well enough in countries with good road networks, like those in Western Europe. However, on the Eastern Front and North Africa, this class of vehicle was hampered by its relatively poor off-road performance. In those theaters, it gradually found itself replaced in the reconnaissance role by the Sd.Kfz. 250 half-track.

The GMC CCKW is a 2.5 ton 6X6 U.S. Army cargo truck that saw service in World War II and the Korean War, often referred to as a "Deuce and a Half" or "Jimmy". The CCKW came in many variants, based on the open or closed cab, and Long Wheel Base (LWB 353) or Short Wheel Base (SWB 352). Initially all versions were of closed cab design (having a metal roof and doors) with all steel cargo beds. But as the war progressed an open cab version was designed that had fixed 'half doors' and a canvas top/sides and the steel bed was replaced by a wooden one to conserve steel. The wood bed proved unsatisfactory and a 'composite' bed with steel sides and framing, but with wooden slats for the bed, was developed. Later on the 'wood/steel' composite bed was replaced by an all steel composite bed.

83840 Soviet BA-10 Armor Car 苏联BA-10装甲车 1:35

The BA-10 was an armored car developed in the Soviet Union in 1938 and produced till 1941. It was the most produced Soviet pre-1941 heavy armored car - 3311 were built in three versions. These versions were the BA-10, the BA-10M (improved version with new radio), and the BA-10ZhD (equipped for dual railway/road use). The basic BA-10 design was developed from the BA-3 and BA-6 heavy armored cars. It had an improved GAZ-AAA chassis and improved armor (up to 15mm at front and turret). It was intended that the BA-10 would be replaced in 1941 by the BA-11 with diesel engine and more sophisticated armor design, but the outbreak of war prevented BA-11 production. The BA-10 was in Red Army service till 1945. Significant numbers of captured BA-10s were used by Finland (at least 24), Germany and other Axis powers in Europe.

83851 Soviet T-28 Medium Tank (Early) 苏联T-28中型坦克(早期生产型) 1:35

The Soviet T-28 was among the world's first medium tanks. The prototype was completed in 1931 and production began in late 1932. It was an infantry-support tank intended to break through fortified defences. The T-28 was designed to complement the heavier T-35, with which it shared many components. The type would not have that much success in combat, but it played an important role as a development project for the Soviet designers. A series of new ideas and solutions were tried out on the T-28 and were later incorporated in future models.

## 83856 IDF Achzarit APC - Early 以色列阿奇扎里特装甲运兵车-早期型 1:35

The Achzarit is based on the Soviet-built T-54/T-55 tank,[1] beginning with those captured from Arab armies during the Arab-Israeli wars. The IDF took the old T-55 tank and removed its turret and the chassis was modified for troop carriage by adding a troop compartment and a rear door.[1] The original Soviet-made water-cooled diesel engine was replaced with a more compact and powerful diesel engine, and other internal systems were upgraded. Reactive armor was installed over the original armored tank chassis. The APC was created in 1988.

## 83861 Schneider CA 法国施耐德坦克 1:35

The Schneider CA 1 (originally named the Schneider CA) was the first French tank. The tanks were widely used in combat during the last war years. Their first action on 16 April 1917 was largely a failure, the tank units suffering heavy losses, but subsequent engagements were more successful. In 1918 the Schneider tanks played an important role in halting the German Spring Offensive and breaking the German front in the French summer offensives. They were active until the end of September 1918, less than two months before the Armistice of 11 November 1918, their numbers having dropped considerably due to attrition. After the war the surviving tanks were mostly rebuilt as utility vehicles but six Schneider tanks were deployed by Spain in Morocco, the type seeing its last action in the beginning of the Spanish Civil War.

## 85505 Soviet SS-23 Spider Tactical Ballistic Missile 苏联SS-23“蜘蛛”导弹车 1:35

The OTR-23 Oka (Russian: ОТР-23 «Ока», named after Oka River) was a mobile theatre ballistic missile deployed by the Soviet Union near the end of the Cold War to replace the obsolete SS-1C 'Soud B'. It carried the GRAU index 9K714 and was assigned the NATO reporting name SS-23 Spider. The introduction of the Oka significantly strengthened Soviet theatre nuclear capabilities as its range and accuracy allowed it not only to strike hardened NATO targets such as airfields, nuclear delivery systems, and command centers, but moving targets as well. It also had a fast reaction time, being able to fire in approximately five minutes, and was nearly impossible to intercept, thereby allowing it to penetrate defenses.

K-141 Kursk was an Oscar-II class nuclear cruise missile submarine of the Russian Navy, lost with all hands when it sank in the Barents Sea on August 12, 2000. Kursk, full name Атомная подводная лодка, which translated, means the nuclear powered submarine "Курск" [АПЛ "Курск"] in Russian, was a Project 949A Антей (Antey, Antaeus but was also known by its NATO reporting name of Oscar II). It was named after the Russian city Kursk, around which the largest tank battle in military history, the Battle of Kursk, took place in 1943. One of the first vessels completed after the fall of the Soviet Union, it was commissioned into the Russian Navy's Northern Fleet.

Dear Modeler and Hobbyist:

Welcome to HobbyBoss!

We are a new manufacturer specializing in injection molded plastic model kits. We bring a new and unique approach to our tool making and manufacturing of high quality low priced model kits by utilizing new technologies in the design, development, and the manufacturing of our model kits.

We are excited to offer you through our distributors world wide, top quality model kits. The combination of quality and fair prices appealing to a modeler's primary desires is our primary goal!

Many new releases will be coming soon to the market in the future. We are ready to set a new standard in injected molded plastic model kits.

Please check our website for the latest news regarding our products. Please visit [www.HobbyBoss.com](http://www.HobbyBoss.com)!

Happy modeling!

83415 USS New York LPD-21 美国海军“纽约”号船坞登陆舰LPD-21 1:700

USS New York LPD-21 is a part of the U.S. Navy amphibious transport dock ship. She is San Antonio-class ship, the U.S. Navy's seventh ship to New York in the name of the fifth ship in the name of the State of New York and the actual serving warships in 2009 on December 7 on the labor. This ship most of its hull about 7.5 tons of steel material is recycled to the World Trade Center towers collapsed on September 11, 2001, mainly for the manufacture of the bow part.

New York and the other sister ship at the same level of the ship is quite different from the sleek lines of the traditional amphibious ships. Its main function is as a Marine Corps combat equipment air-cushion landing craft (LCAC) and MV-22B Osprey type VTOL, the parking and landing platform.
