Experienced Builders

Now you can build the model that's best for YOU.

You have not only a wide variety of Revell model kits to choose from, but now the kits are coded according to the level of skill required for assembling them. Revell is identifying the Skill Level recommendation of each kit, right on the box. With these helpful guidelines, every hobbyist can choose the kits that he feels are best for his particular modeling ability. Whether it's Level 1, 2 or 3, each of our kits meets the same high standards of detail and quality for which Revell has long been known.

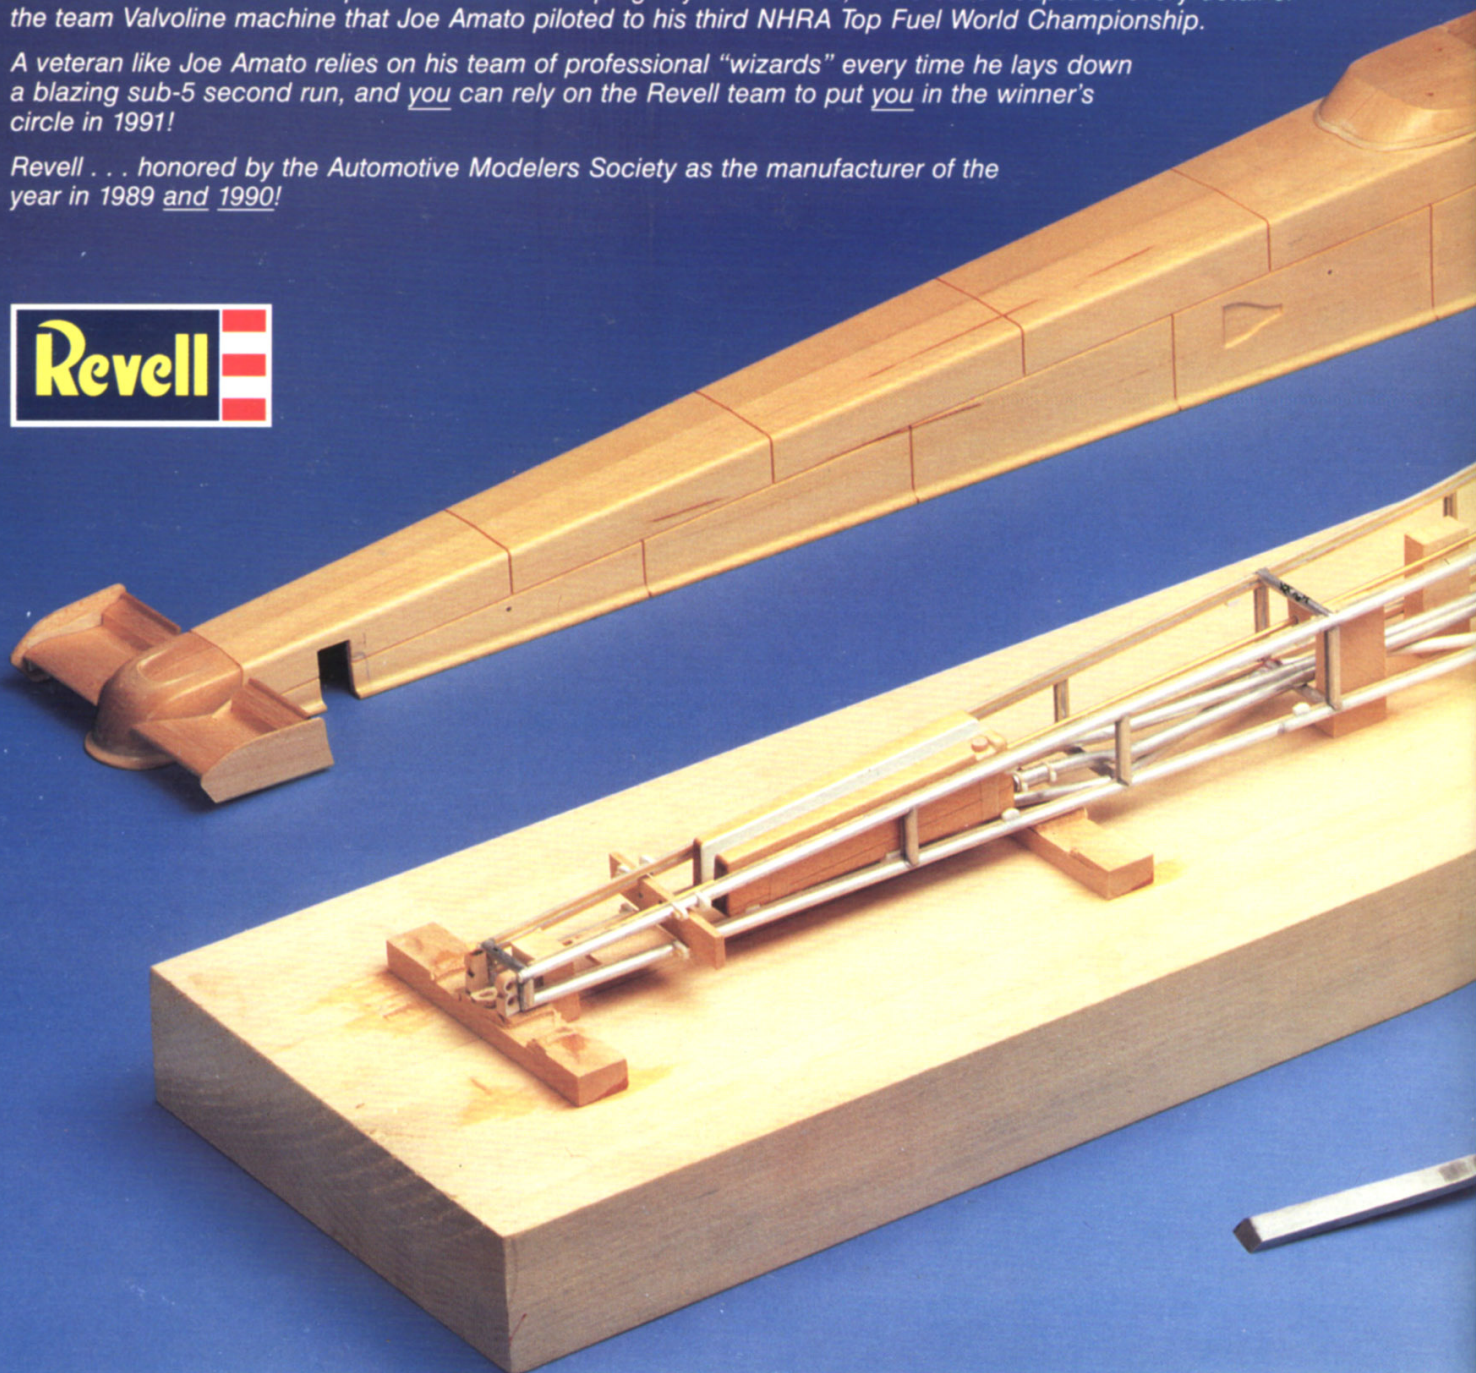

# From Start to Finish...

"Top Fuel" Dragsters . . . these 30-foot long, "manned missiles" are the fastest racing machines in the world of motorsport! Powered by 496-cubic-inch supercharged engines that convert gallons of volatile nitromethane fuel into 3,000 ground-poundin' horsepower, these exotic quarter-mile machines slash through the lights at speeds in excess of 285 miles per hour.

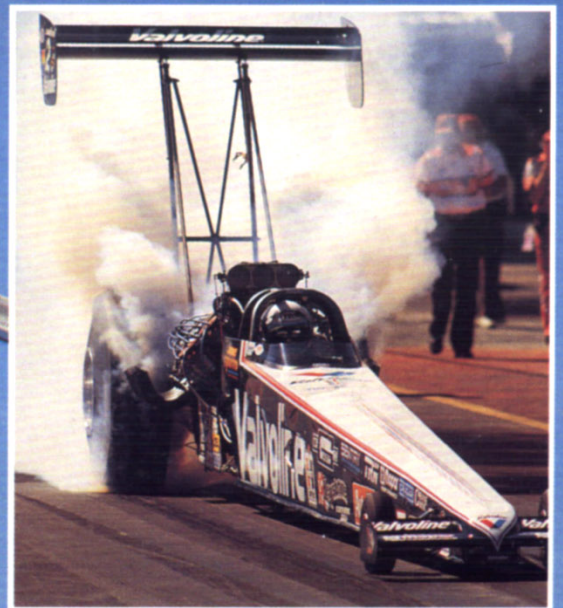

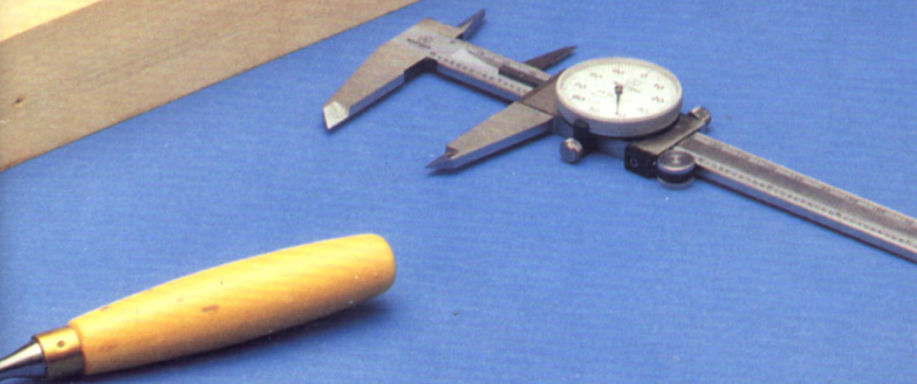

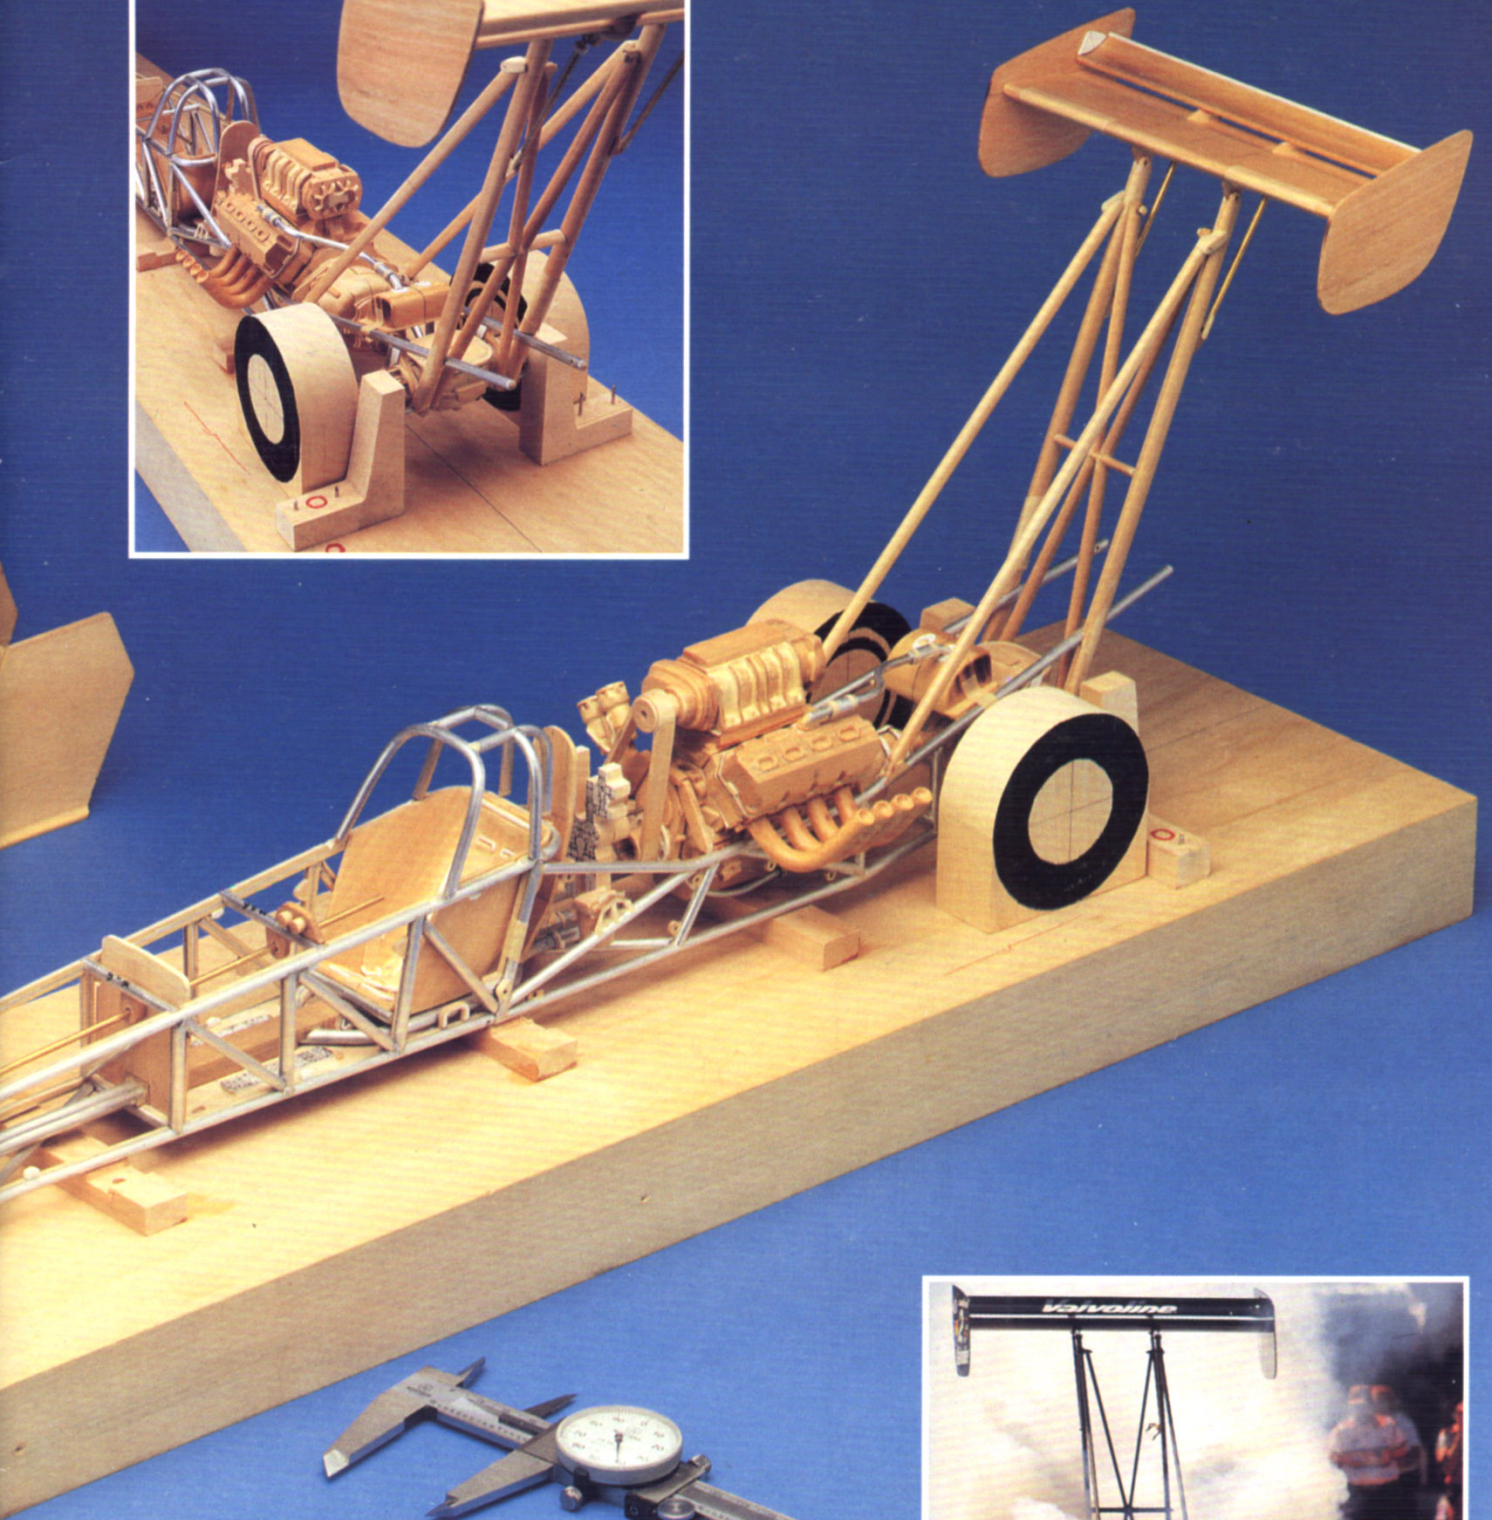

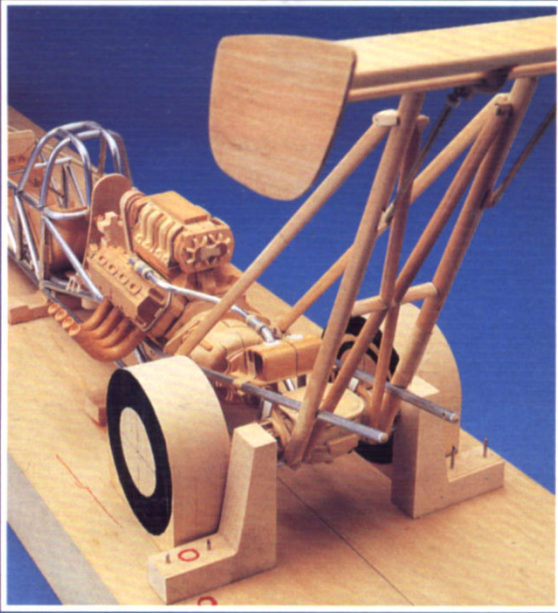

In 1991, the skilled team of Revell professionals has created a 1/25 scale kit of the team Valvoline machine that Joe Amato piloted to his third NHRA Top Fuel World Championship. To perform this feat, Revell craftsmen first hand-carved a 1/10 scale, fully accurate wooden version of the Valvoline dragster working from detailed drawings and photographs taken from every angle. This three-dimensional wood "pattern model" is used to make epoxy molds, which are then panographed down in size to the correct scale so permanent metal molds can be created for plastic kit manufacturing. Unfortunately, the beautiful wood pattern model shown in the accompanying pictures had to be destroyed as part of the process in making the epoxy molds. From the tubular Swindahl chassis to the miniature Keith Black "Hemi" V-8 complete with dart "twin-plug" cylinder heads, this creation captures every detail of the team Valvoline machine that Joe Amato piloted to his third NHRA Top Fuel World Championship.

A veteran like Joe Amato relies on his team of professional "wizards" every time he lays down a blazing sub-5 second run, and you can rely on the Revell team to put you in the winner's circle in 1991!

Revell . . . honored by the Automotive Modelers Society as the manufacturer of the year in 1989 and 1990!

***...It's a Winner!***
